

Design a maze

To make one you'll need:

- Paper plates
- Various household supplies (cardboard, straws, cotton balls, string, etc)
- Glue (we found tacky glue and hot glue worked best)
- Scissors
- Marbles

First, issue the challenge. The goal of this project is to get a maze made that fits a marble, contained inside a paper plate, that works completely, and doesn't break when playing with it. Use your designing

skills.

What worked best? What was not as good? What were the best parts and worst parts of the design? How could you improve on in the future?
